PRICE CATALOGUE,

Fall 1900, Spring 1901.

This PRICE CATALOGUE is issued as a supplement to our 1900 Descriptive Catalogue, "What to Plant and How to Plant It," and abrogates all previous list quotations on trees and plants. The prices will be found as low as strictly high-class trees and plants can be grown and sold, under our most liberal offer

FREIGHT PREPAID TO ALL PARTS OF THE SOUTH

on orders amounting to \$5.00 or more.

Our 1900 Descriptive Catalogue,
"What to Plant and How to Plant It"

will be sent free to all applying for same. If you have mislaid or lost the copy sent to you apply for another.

READ CAREFULLY BEFORE ORDERING.

Terms and Conditions of Sale, etc.

Application of Prices.—Five, fifty and five hundred trees or plants of one class at ten, hundred and thousand rates, respectively, purchasers selection of varieties from one fruit or class of plants having a common price. For instance fifty or more paches, having a common price, in one or more varieties, would come at hundred rates, and five hundred or more, at thousand rates.

No Charge for Packing or Packages.—Our packing is done in the most careful manner, in neat boxes, bales or packages, for which no charge is made.

Freight Prepaid.—On all orders for nursery stock amounting to \$5.00 or over, which are accompanied by remittance in full, at prices named in this list, we will ship by FREIGHT, PREPAID, to all regularly established shipping points in the following States viz: Florida, Georgia, South Carolina, Alabama, Mississippi, Louisiana and Texas. These are the only conditions under which freight will be paid. If cash in full does not accompany the order goods will be shipped collect, and no future allowance will be made.

Express Shipments are in many ways more satisfactory than freight, but more expensive. Purchasers sending us cash orders amounting to \$5.00 or

over, and wishing trees or plants shipped by EXPRESS, PREPAID, to points in Florida, Georgia or Alabama will add 5 per cent of the amount of order to remittance. To points in South Carolina, Mississippi, Louisiana and Texas, add 10 per cent to amount of order.

Guarantee.—Everything shipped out by us is guaranteed to be strictly healthy, carefully selected or graded well rooted, true to name, and properly packed, and we hold ourselves liable under this guarantee to refund original price received or replace stock in case of default, but no more. All claims for damages or deficiencies must be made inside of five days from receipt of goods. If goods are not accepted upon these conditions, they must be returned at once and money will be refunded.

Substitution.—When out of varieties or sizes ordered, we substitute, unless instructed to the contrary, always giving the purchaser the benefit of our best judgment in so doing. In all cases we will cheerfully refund the money instead of substituting, if so requested.

Terms Cash with Order, if for immediate shipment. On orders booked in advance, 25 per cent down at time of placing order, to insure us reserving goods; balance at time of ordering goods shipped.

CITRUS FRUITS. ORANGES, POMELOS, LEMONS, ETC.

For the past few years there has been a greatly increased demand for orange and other citrus trees grown at a safe distance from the old grove and orange nursery centers of the State—many of which are badly infested with numerous injurious insects and diseases. This, together with the better ripened and more hardy condition of our trees, caused by the more temperate climate in which they are grown and the peculiar adaptability of our soil, has necessitated a constant increase in our supply of orange trees until this branch of our nursery has become of first importance.

Our citrus nursery is not only one of the largest but is pronounced by all who have seen it to be the finest ever grown in the State.

Over 125,000 Trees of Orange, Pomelo, etc., Budded at the Ground on Sour or Sweet Orange, Rough Lemon or the Hardy Citrus Trifoliata Stocks.

Stocks for Oranges and Pomeles.—A wide difference of opinion and much localism exists as to the best and most practical stock for oranges, pomeles, etc. To meet this varied demand we propagate all standard varieties on four of the most popular stocks. Orders not stating the stock desired will be filled with trees budded on the stock that, in our judgment, is best suited to the section in which they are to be planted.

The Sour Orange as a Stock.—The sour orange has been extensively used as a stock in the past. Makes a handsome large grove tree, but the young trees are not of as rapid growth as the sweet orange or rough lemon. Trees budded upon it usually produce crops of choice fruit from four to six years from planting.

The Sweet Orange as a Stock.—The sweet orange is a favorite stock with many planters, some claiming that the fruit is of better quality, and that the trees are more hardy and longer lived. Young trees budded upon it grow off vigorously. make handsome grove trees, and we consider them somewhat more hardy than trees budded on sour orange or rough lemon. Trees budded upon sweet orange usually produce fruit in from four to six years from planting.

Rough Lemon as a Stock.—The rough lemon is the most vigorous stock for young trees. Trees budded on it are very tender, and should not be planted where there is danger from freezes. It is well adapted for planting in the extreme southern portion of Florida, and is especially adapted to the lower East Coast. Trees budded on rough lemon usually produce choice fruit in from three to five years.

The Citrus Trifoliata as a Stock.—The citrus trifoliata, when used as a stock for the orange or grapefruit, imparts hardiness, productiveness and early bearing qualities to the variety budded on it. The use of citrus trifoliata as a stock is not an absolute protection against damage from frost during our most severe seasons, yet it materially increases hardiness by keeping the trees in a dormant condition during the winter season several weeks longer than any other stock yet used.

Early Bearing and Early Ripening.

The picture shown on this page was taken 18 months from the setting of the buds. Trees budded on Trifoliata not only produce fruit younger, but ripen it from three to six weeks earlier in the season.

JAFFA ORANGE ON TRIFOLIATA IN NURSERY,
18 MONTHS FROM BUD.

Oranges, pomelos, etc., budded on trifoliata are not objectionably dwarfed, as many suppose. Young trees in the nursery grow quite as well and make as large trees as those on any other stock. In the grove they make a beautiful, low-branched, stocky and compact tree. We have never known of a case of Foot-Rot on TRIFOLIATA. After attaining a bearing age the trees have a tendency to overbear, thus retarding the wood growth.

The early bearing quality and the extreme productiveness is of especial importance to the planter—the trees producing profitable crops in from one to two years sooner than when budded on other stocks, reducing not only the risk from frost, but also the cost of bringing the grove into profitable bearing, and of protection to a minimum.

The citrus trifoliata becomes entirely dormant during the winter, withstanding zero weather without injury. With the use of citrus trifoliata as a stock for oranges and grapefruit, the orange industry can not only be revived in the old orange belt, but extended into the more northern portion of Florida, along the Gulf Coast and in southern Georgia, Alabama, Mississippi, Louisiana and Texas.

Will an Orange Grove Pay?—We believe it will, and, as an evidence of our faith, have planted within the last six months over sixty acres of grove on the Pomona plantation at Macclenny. All the trees were budded on the citrus trifoliata stock and largely of the Satsuma variety. Two hundred trees were planted to the acre. We will head low, and during the winter will bank carefully with earth until they reach a bearing age, after which we will either provide some form of protection for the entire tree, or depend upon banking high among the branches; saving enough of the trees in case of a severe freeze so that the injury will be no worse than a hard pruning. The sure and prolific bearing qualities of the Satsuma, when budded on the trifoliata, its early ripening, and the high prices received for the fruit on the market will enable us to realize a handsome income from the grove if we only save one crop out of three. In most peach and apple growing sections one crop in three is considered satisfactory.

No. 1. Very Heavy and Stocky. No. 2. Medium Stocky.
LOW-BRANCHED ORANGE TREES.

PEACHES—A MONEY-MAKING FRUIT FOR FLORIDA.

Few Places Can Offer as Many Inducements to the Commercial Peach Orchardist as Florida.

First. Florida is fortunate in having several choice market peaches. The Jewell, Waldo, Florida Gem, Imperial, Pallas, and Oviedo, all bear a close resemblance and sell on the market as Florida Honey Peaches. All are free-stone, identical in color, similar in shape and with only a slight variation in flavor. They are sweet and juicy, with an extremely rich aromatic flavor, to be found in no other peach in existence. They ripen in the order in which they are named, extending over a period from May 20 to July 20. The fine quality and flavor of the first to ripen creates a market for those ripening later, which gradually becomes better and larger as the season advances, the Oviedo being the largest and finest flavored.

Second. The early bearing characteristic of this strain of Florida peaches. The trees, if properly cared for, will produce a fair crop—an average of four quarts per tree within eighteen months from date of planting. A good crop of

4 to 5 ft. 3 to 4 ft. 2 to 3 ft.
STAKE-TRAINED ORANGES.

4 to 5 ft. 3 to 4 ft. 2 to 4 ft.
ONE-YEAR PEACH TREES.

from twenty to thirty quarts, an average of one carrier per tree, within thirty months from planting. If you can carry your orchard through one year, it will pay its own expenses after that.

Third. Annual crops. Since their introduction from ten to twelve years ago, these peaches have never failed to produce a full crop each year, with one exception—that of 1899—when the Jewell and the Waldo were caught in full bloom by the freeze of February 15. The mercury falling nearly to zero, in many places killing the entire tops of trees of these two varieties. The remaining four varieties produced a full crop in 1899.

Fourth. In June and July, 1900, the Sneed, Triumph, Alexander, etc., were being shipped from Georgia, Alabama and South Carolina in carload lots, at a loss on account of the poor shipping quality, absence of flavor in the fruit, and the rainy season. During the same period, and with the same rainy season to contend with, the Florida growers having Jewell, Waldo, Florida Gem, Pallas, Imperial, or Oviedo were netting from express shipments from 75 cents to \$1.50 per carrier. If the Florida orchards had been sufficiently large to have warranted carload shipments, the net returns would have been materially increased. The cost of freight would have been less, the fruit would have arrived on the market in better condition and sold for better prices.

Fifth. Land is cheap and plentiful, the necessary clearing and cost of preparing it for the trees is small as compared with most sections. Subsequent care and cultivation is slight.

Figure for yourself the Cost of and Profits from a Peach Orchard.

Cost of Orchard Until Three Years Old. Two hundred trees per acre, \$9.00 per 100. If 500 or more are used, \$70.00 per 1,000 for the trees, freight prepaid. Laying off orchard and planting, $1\frac{1}{2}$ cents per tree. Fertilizer for first year, two pounds per tree, applied in three applications; for second year, four pounds per tree; for third year, five pounds per tree. Cost of fertilizer, from \$30.00 to \$36.00 per ton. One good man and a mule can attend from forty to fifty acres of orchard, doing the cultivation, fertilizing, trimming, etc. The second year sow beggar-weed in the orchard after the fruit is harvested, keeping a small place near the trees cultivated. This adds humus to the soil and shades the ground during the hot summer months. Add to the above the cost of land and clearing, which will vary according to locality. As to lasting qualities, we know of a ten-year-old orchard that produced an average of \$2.00 net per tree this year.

Returns from an Orchard within Thirty Months.—Trees cared for as above should produce an average of four quarts per tree eighteen months from planting. Six trees to fill a twenty-four-quart carrier, thirty-three carriers per acre. Second season, thirty months from planting, trees should produce from twenty to thirty quarts each—an average of one carrier per tree; two hundred carriers per acre. If fruit nets \$1.00 per carrier you have an income of \$233.00 per acre within thirty months from planting.

We have done this ourselves. Our books and records will show it. Others can do as well.

We Have Faith in Peach Growing.

✋ This Season We are Arranging to Plant from 100 to 150 Acres to these Varieties. ✋

WILL IT PAY US? HELP US FIGURE IT.

Basing our figures upon the above estimate, and valuing our land at \$5.00 per acre, cost of fence sufficient to turn cattle, \$1.50 per acre; cost of clearing and breaking, which would consist of felling the timber and piling in rows 40 feet, leaving the logs in these rows to decay and go back into the soil, at \$5.00 per acre, makes the total cost, to end of first year, \$4,322.00; to end of second year, \$6,194.00; and to end of third year, \$8,066.00.

Eighteen months from planting we should get 3,333 crates of fruit; thirty months from planting, 20,000 crates of fruit—a total of 23,333 crates. If we only net 75c. per crate (which is low for this class of fruit when shipped in carload lots), we have a gross income of \$17,499.75, from which we will subtract cost of orchard, \$8,066.00, leaving us a net cash profit of \$9,433.75 on a three-year investment, and an orchard worth \$10,000.00.

OVER ONE MILLION TREES AND PLANTS,

All Carefully Grown and Adapted to Southern Planting.

ADD THEM UP. Every tree and plant is grown and trimmed with the utmost care, and every precaution taken to keep them perfectly healthy and free from insect pest and disease. Hundreds of acres of the choicest land are required to grow them, all of which is kept in the highest state of cultivation and as clean as a garden.

THE FOLLOWING TREES AND PLANTS IN STOCK:

Peaches—One year trees (we do not offer two year peach).....	380,000
Plums—One year trees (we do not offer two year plum).....	68,400
Pears—One and two year old trees.....	94,700
Apples—1 year old. No two year trees in stock.....	9,300
Kaki (Japan Persimmon)—One, two and three year old trees.....	19,500
Mulberries—One year old trees.....	8,400
Grapes, Muscadine Varieties—One and two year vines.....	17,000
Grapes, Trellise Varieties—One and two year vines.....	14,900
Figs—One year old trees.....	18,000
Grafted and Budded Pecans—One year old only.....	7,800
Pecans—Seedlings; one, two and three years old.....	86,200
Walnuts—Japan and English, seedlings, one year old.....	7,800
Chestnuts—Japan and Spanish, seedlings, one and two years old.....	3,200
Oranges, Pomeles, etc.—One and two year buds on from three to six year old stocks.....	125,000
Trifoliata Seedlings—One year old.....	140,000
Rose Bushes—One and two year old plants.....	88,490
Ornamental Trees, Shrubs, Bushes, etc.—One to four years old.....	42,000
Camphor Trees—One to four years old.....	18,900

1,089,090

COME AND SEE US AND BE CONVINCED.

 **WE EXTEND A CORDIAL INVITATION** to all prospective buyers to visit our Nurseries at Macclenny. **SEEING IS BELIEVING.** Few people realize the enormous amount of nursery stock grown and sold. If you once see our trees and plants, our arrangements and conveniences for handling them and for filling orders and shipping, you will be convinced that we can not only save you money on your purchases, but are in a better position and better prepared to fill your orders than any other nursery in the lower South.

REMEMBER THAT WE PAY THE FREIGHT

On all cash orders amounting to \$5.00 or more.

4 to 5 ft. 3 to 4 ft. 2 to 3 ft.
ONE-YEAR PERSIMMON TREES.

SPECIAL DISCOUNT

On Grapefruit and Orange Trees.

SPECIAL ATTENTION is being given to the Orange and Citrus Fruit Department of our Nursery. It is our ambition to build this Special Department up to the point where we have already built our general Fruit Department, in which we are now growing and shipping more trees than all other nurseries in the State combined : : : : :

We want every orange grower who anticipates planting trees to have at least a sample order. One order means a permanent customer for the future. We therefore offer a **SPECIAL 20% DISCOUNT** on Orange and Grapefruit Trees, budded upon either Sweet or Sour Orange or Citrus Trifoliata : : : : : : : : : : :

This is a Special Offer to induce new customers, but as it would be an injustice to old customers and mutual friends, to not extend them the same discount, we have made it a general offer for all orders booked during the remainder of the Season

PRICE LIST.

Purchasers will accommodate us by using order sheet in making up orders. Read terms and conditions before ordering.
FREIGHT PREPAID.

CITRUS FRUITS.
ORANGES, POMELOS, ETC.

VARIETIES IN STOCK.

Oranges.—Bessie, BOONE'S EARLY, Centennial, Early Oblong, Homosassa, JAFFA, King, Lamb's Summer, Magnum Bonum, Majorca, Mandarin, Maltese Blood, Mediterranean Sweet, Nonpareil, PARSON BROWN, Pineapple, Ruby, SATSUMA, St. Michael's Blood, Sweet Seville, TANGERINE (DANCY'S), TARDIFF (HART'S LATE). Washington Navel.

Grapefruits, or Pomelos.—*Aurantium*. Duncan, Excelsior, Florida (common). Marsh Seedless Triumph, Walters.

Lemons.—Genoa, Villa Franca.

Limes.—Common Florida, Persian Seedless, Rangpur Sour, and Tahiti.

Prices of Oranges, Pomelos, Lemons and Limes.

PEACHES.

A fruit adapted to the entire South, and which has done more toward bringing the South into prominence as a fruit-growing section than all others. It comes into bearing in the shortest period after planting, and is more remunerative than any other fruit grown over such a large area. Decidedly a fruit for the people, and should be grown by everyone.

Varieties Best Adapted to North Florida and Corresponding Latitudes

Angel, Cable's Indian, Carpenter's Cling, Climax, Colon, Countess, Dwarf Japan Blood, Early Cream, Edith, Estella, Ferdinand, Florida Crawford, Florida Gem, Gibbon's October, Honey, Imperial, Jewell, La Reine, Mamie Ross, Mascotte, Onderdonk, Oviedo, Pallas, Powers' September, Sangmel, Stanley, Sunset, Taber, Texas, Triana, Victoria, Waldo.

Peaches Best Adapted to South Florida and Extreme Southern Texas.

Angel, Bidwell's Early, Bidwell's Late, 'Chinese Blood, Florida Crawford, Florida Gem, Gibbons' October, Jewell, La Riene, Oviedo, Red Ceylon, Suber, Waldo.

Peaches Best Adapted to Portions of North Florida, Georgia and Corresponding Latitudes.

PRICES OF ROSES.

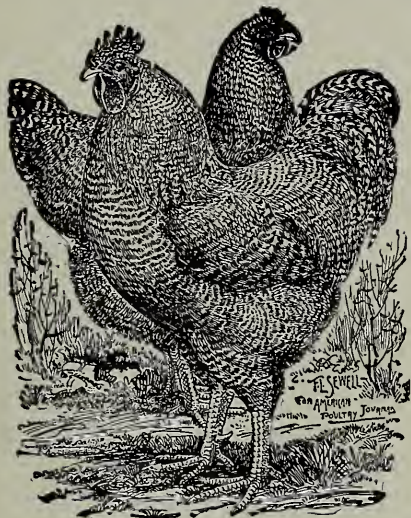

1 year old, field-grown grafted plants...25c each, \$2 00 per 10, \$17 00 per 100
 2 years old, field-grown grafted plants...35c " \$3 00 " \$25 00 "

PLANTS BY MAIL.—Small orders of the 1-year-old size can be sent by mail. Price by mail, post paid, 30 cents each, \$2 50 per 10. Two-year-old bushes are too large to go by mail.

The foregoing is a partial list of the varieties we offer. Space will not permit of our describing any of them here, but we have classed them in three general lists: **EVERBLOOMING**, composed largely of Tea and Hybrid Tea varieties; **SEMI-ANNUAL BLOOMING**, comprising the Hybrid Remontant and Moss Roses; and **CLIMBERS**, comprising the varieties best suited for climbing on porches and other places.

All the varieties listed are the very choicest, and will give perfect satisfaction.

POULTRY DEPARTMENT.

THE POULTRY we here list, consists only of fowls carefully bred from selected stock. Our equipment and system of breeding are fully up to the standard, and our stock will be found High Grade, and as represented.

Eggs for Hatching a Specialty.

Our pens from which we offer eggs for hatching are filled with high scoring birds. Each fowl is carefully selected and every point considered. Every precaution is taken to keep the breeds and strains pure.

A FAIR HATCH.

We test eggs from all our yards early in the season, and it is our intention to send out none but fresh, fertile eggs, that hatch well with us, and should with our customers; but if, under favorable circumstances, you fail to get at least six chicks from a setting, we will duplicate the order at half price.

Eggs for Incubators a matter of correspondence.

Barred Plymouth Rocks.—The great American breed. The people's favorite, and the most practical all-purpose fowl of the times. Good layers, good setters and good table fowls. Our stock of Barred Plymouth Rocks is very fine and carefully bred. Price, per trio, \$5 00; single birds, cocks, \$2 50;

pullets, \$2 00; eggs, \$2 50 per setting of 13.

White Plymouth Rocks.—A fowl possessing all the good points of the Barred Plymouth Rocks, with a pure white plumage. Price, per trio, \$6 00; single birds, cocks, \$2 50; pullets, \$2 00; eggs, \$2 50 per setting of 13.

Brown Leghorns, (single combed.)—Our strain of Brown Leghorns are large in size, fine in form and well colored. Excellent layers, having scored the highest record per hen of any breed we have; non-setters; chicks are easily raised, hardy and healthy. Price, per trio, \$5 00; single birds, cocks, \$2 25; pullets, \$1 75; eggs, \$2 25 per setting of 13.

White Leghorns, (single combed.)—Wonderful egg producers, non-setters. Price, per trio, \$5 00; single birds, cocks, \$2 25; pullets, \$1 75; eggs, \$2 25 per setting of 13.

Black Minorcas.—Excellent layers, good foragers, fair size. One of the most desirable breeds for the South. Price, per trio, \$6 00; single birds, cocks, \$2 50; pullets, \$2 00; eggs, \$2 50 per setting of 13.

Silver Spangled Hamburgs.—A most beautiful fowl and an excellent layer. Price, per trio, \$7 00; single birds, cocks, \$3 50; pullets, \$3 00; eggs, \$3 50 per setting of 13.

Pit Game.—In these pens we have some very choice Heathwood, Irish Grays, Tornados, Transatlantics and Warhorse strains. The eggs for hatching are not kept separate. They are all fighting stock and will give satisfaction. Price, per trio, \$7 00; single birds, cocks, \$3 50; pullets, \$3 00; eggs, \$3 00 per setting.
